

# WildSights, Quick Start Guide

## Manage animals

1. Before you can do anything else, you have to add one or a few animals.
2. Click “Manage Animals”.
3. From here you click “Add”, which opens a dialog for adding a new animal.
4. Add animal type and a name. You can also add description and/or an image none of which are mandatory.
5. Click “OK”.
6. Click “Save”.
7. Animal is now persisted in a json file, , DataStore/Animals.json.
8. You are now ready to add a new Sighting.

## Add Sighting

1. Click “Add Sighting”.
2. From the dialog you can select an animal, date/time, how many, a description and in the map object you can set a pin where you encountered this animal.  
Date/time selection supports scrolling, just highlight which value you want to change and scroll up or down on your mouse.  
Map supports scroll zoom and dragging using you left mouse button. You can select one location by left clicking somewhere in the map.
3. Click “Save”.
4. Sighting is now persisted in a json file, DataStore/Sightings.json.

## History

1. If you want to view your past sighting, click “History”.
2. All your past sightings will be loaded in the list view.
3. You can filter the list on animal type and date from/to.
4. You can print the currently filtered list by clicking “Print Selection”.
